Tim	Ryan	Will D57 have any COVID vaccine available for 5-11 yr old's? Have heard other districts have secured doses to administer
Amy	Lies	Hi there. Not sure if you are wondering how everyone is feeling about masking in the schools, but I wanted to chime in my opinion (and that of my husband as well). Whenever you are ready to let the kids be mask-free, we are comfortable with it. Thank you.
Pam	Koerkel	Thank you for your decisions to help keep our children/families safe during the pandemic, including the recent start of SHIELD testing. I hope that D57 has been exploring options for providing a vaccine clinic for students going into the winter months, and with the anticipated expansion of eligibility for 5-11 year olds. School-based clinics are one of the targeted locations for the roll-out of the pediatric vaccine dosage/formulation, which is only starting to become available. A D57 clinic would increase access and demonstrate support for the role of this safe and effective vaccine in keeping our D57 community healthy. It is our school district's role to help reduce the educational, health, and emotional impacts of this pandemic on our students, and increasing vaccination rates is one step toward the return to normal that we all need.
